

Requisitions / Workflows

AccuFund Anywhere Online

Streamline Your Purchase Order and Payment Request Processes

AccuFund's browser based system makes it easy to track requisitions through multiple approval stages, until they get to the purchasing agent or Accounts Payable for payment. All activity is date- and user-stamped for convenient status updates and reporting.

Using this online outing system, you can scan, attach, and forward documents to the right people, so reviewers can quickly comment on, approve, or return requests.

Keep Everything Organized with Approval Trees

A rules-based, approval tree architecture is the key to the Requisitions and Workflow Management module's effectiveness.

The people responsible for ordering products and creating purchase orders sit at the top of each approval tree. Requests can be routed to different approvers based on cost center or department, and approval levels can be added automatically when certain conditions—such as dollar amounts or types of requests—are met.

Authorized users can easily view the status of their requisitions through a simple folder-based browser screen. Employees who function as both requesters and approvers in different situations can be assigned different entry rights in multiple approval trees.
