

AccuFund, Inc releases version 3.0 of the AccuFund Accounting Suite. The major improvement is the utilization of the Sybase Adaptive Server Anywhere (ASA) SQL database in the suite. While AccuFund has always utilized a number of standard database features such as transaction framing with rollback, the inclusion of ASA enhances these features with improved performance, scalability, ODBC access, and availability of third party tools such as Crystal Reports.

Besides the inclusion of Sybase ASA, AccuFund continues the process of product enhancements in this release. Some of the enhancements include expense control in the Professional Edition, expanded features in the financial report writer, additional budgeting capabilities that allow tracking of three distinct budgets including agency, project and grant budgets.
