AccuFund announces the release of version 3.01 including document management capabilities in all modules. Document management has become a major concern for nonprofit and government organizations, especially those receiving grants. Funding sources are regularly requesting that all vendor bills be copied and included with funding requests. AccuFund makes this a one-step process as the AP clerk can now scan the invoices and attach them to the billing transaction in the Accounting Suite. Reports can then be run at month end that include images of the original invoice.

Other enhancements include a "query-browse" function in all modules that makes it easy for users to select and report sub-sets of data on screen and for reporting.
